

# DRG®

# FERTILITY ELISA

## NEW PRODUCTION AT DRG

The DRG ELISAs are dedicated for in-vitro diagnostics for the diagnosis of immunologically caused fertility disorders.

Around 50% of all couples suffering from fertility disorders reveal antibodies which are at least partially responsible for the infertility diagnosed. These antibodies may, for example, prevent fertilization of the oocyte. Even in-vitro they clearly cause a reduced fertility rate as well as a reduced pregnancy rate after embryo transfer.

PRODUCT	Cat.No.	Quantity	Incubation time	CE/RUO
Anti <b>Sperm</b> Antibody ELISA (serum)	EIA-1826	96 Wells	60/60/30 min	CE
Anti <b>Sperm</b> Antibody ELISA (seminal)	EIA-4249	96 Wells	60/60/30 min	CE
Anti <b>Ovarian</b> Antibody ELISA	EIA-2937	96 Wells	60/60/30 min	CE
Anti <b>Zona Pellucida</b> Ab ELISA	EIA-6138	96 Wells	60/60/30 min	CE
